# Veradigm® DORN— Built with Laboratories and Radiology Centers in Mind

Laboratories and radiology centers need healthcare providers to utilize streamlined connections so they can receive orders and share results quickly with EHRs—but traditional connections between EHRs and laboratory/radiology partners are completed individually. They require time and resources to integrate and test; then require additional time and resources to maintain both the connection and an up-to-date compendium for each integration.

## DORN streamlines your integrations with healthcare providers and EHRs

Veradigm offers laboratory and radiology centers a streamlined integration into a cloud-based hub with one API integration, the Diagnostic Ordering and Results Network (DORN). This provides laboratories and radiology centers with access to thousands of healthcare providers securely and instantly. DORN utilizes a standardized integration format for all EHR vendors, eliminating the need to customize formats for each connection.

DORN saves laboratory and radiology centers both time and money on EHR integrations by using a hub-and-spoke model of API connectivity.

**THIS ELIMINATES:**

| | |
|---|---|
| Time-consuming implementations | Administrative burden from manually receiving orders or sharing results |
| Need for maintenance fees and upkeep on multiple individual interfaces | Compendium management for each individual connection |

## What DORN can do for laboratories and radiology centers

- ✓ Experience 99.99% uptime reliability and increase health-care provider satisfaction.*

- ✓ Integrate more rapidly in our growing network of thousands of healthcare providers over numerous EHR platforms, connecting with clients in a matter of days not weeks.

- ✓ Reduce the cost of implementation and project management, and eliminate ongoing maintenance through a streamlined API integration.

- ✓ Streamline implementation through use of a standardized integration, eliminating the need to customize formats for each healthcare provider.

- ✓ Simplify compendium management by managing a single compendium that is standardized across EHRs, and made available to all EHRs when updated.

- ✓ Improve order accuracy through automatic order validation against the current compendium.

- ✓ Help ease administrative burden with the ability for health-care providers to submit laboratory and radiology orders directly from their EHR workflow, monitor order status (with near real-time visibility), and share results electronically.
