

Electronic Case Reporting

Electronic Case Reporting (“ECR”) allows Clients to send direct messages from the Allscripts designated Allscripts EHR in the ordering document to public health agency(ies), as designated by Allscripts, for public health reporting purposes as designated by Allscripts. Use of ECR is subject to the agreement between Allscripts and Client and the Carequality Connection Terms which are set forth at <https://carequality.org/wp-content/uploads/2019/08/Carequality-Connected-Agreement-Exhibit-1-8.2019.pdf>. ECR is a Carequality use case under Section 5 of the Carequality Connection Terms. The Carequality Connection Terms may be modified or amended from time to time, effective on the date that the amended version is posted to such website and are incorporated by reference. The Carequality Connection Terms are a framework for sharing data and apply to ECR. ECR does not include the Carequality connection or integration or other Carequality products and services or Carequality use cases. Any use of Carequality beyond this use case will need to be purchased and addressed under a separate agreement between the parties. Client acknowledges that ECR must be implemented before it can be used by Client.
